- Anti-Splash Design
- Central 1.5" BSP Waste

Improve handwashing capacity swiftly and cost-effectively with our wall-hung stainless steel wash troughs.

Standard lengths - 1200mm, 1500mm, 1800mm and 2400mm. All are manufactured in the UK as one piece units from grade 304 austenitic stainless steel, 1.2mm thick, with a smooth satin polished non-reflective surface.

Tap Holes: Our quick delivery models are supplied with pre-drilled 28mm single tap holes, suitable for single inlet feed taps and most water-saving non-concussive push taps, which are the most popular option for these types of wash troughs. Our made-to-order range offers various tap hole configurations, including pairs for hot and cold taps, as well as larger 35mm holes for monobloc mixer taps with twin feed inlets.
